

Career Pathways in Engineering Drafting

April 28, 2020

This exercise is intended to explore the many different career avenues related to the ENGINEERING world. Engineering, no matter what specific area, involves drafting (drawing) some type of graphic picture to communicate information to others, ei. Designer to builder of parts/device. The engineering profession is vast and has “many” offshoots to aspects that all have moderate to lucrative careers.

You Mission: Respond to the following questions

1. What are 6 different drafting career fields?
2. What are the approximate salaries for each of these?
3. What are some of the related, or offshoots, from these general 6 careers?
4. Describe and/or provide some examples of each type of these drafting careers. Show specific examples and/or pictures of each type.
5. Where would you have to go to acquire to knowledge, training, and/or skills?
6. Lastly, out of all of these types of drafting/engineering pathways, which one appeals to you the most? Explain why you might choose this Or why you might never choose this line of future work.

Please submit this investigative adventure in a word document that has been typed, not handwritten, in an email to dlake@kibesd.org for the incredible amount of points you may earn to enhance your grade.
